Deadline for manuscript
submissions:

31 May 2020

Message from the Guest Editor

This Special Issue aims at collecting original contributions and comprehensive reviews on topics such as the uptake, transport, and storage of trace elements in the marine environment as well as a determination of their functions, studies on novel marine metalloenzymes, their structures and mechanisms of action, the isolation, synthesis, and characterization of marine natural products, as well as studies of their function and biological roles, discovery of molecules involved in intra- and interspecies and/or kingdom communications, etc. These topics are meant to be broadly defined, the unifying factor being a marine origin. If you are working on any of these or related areas of marine chemistry, please consider contributing to this Special Issue.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 22nd year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Scopus and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 13.1 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2019).
